CHRYSANTHEMUMS

Do you love Chrysanthemums but due to early frosts are seldom able to get them to bloom? If you are one of these you may take courage. We were in the same boat. We decided that if the ones we had wouldn't bloom we would get some that would. So we ordered every good early one we could find advertised and last fall we had a garden of early Chrysanthemums that attracted many people to see them. We had them in bloom from September 1st on. On October 12th I counted 37 varieties in bloom.

No matter where you live you may grow and bloom Chrysanthemums. To help you further I have grouped the varieties according to their blooming dates. If you live in the extremely high altitudes order your plants from the first list with maybe two or three to try out from the second list. Those of you who are a little more favorably located can grow all of the ones listed in the first three lists, as they are all early.
